

Exam Name - Certified Advanced Software Security Tester (CASST)

Sample Exam

1. What is the goal of static application security testing (SAST)?

- A. Find runtime vulnerabilities
- B. Detect source-code flaws early
- C. Check API compliance
- D. Validate SSL configs

Answer **B**

2. Which describes a black-box test?

- A. Tester uses full source code
- B. Tester uses partial documentation
- C. Tester has no internal knowledge
- D. Tester uses runtime logs

Answer **C**

3. Which DAST tool advantage is correct?

- A. Works at code level
- B. Requires source code
- C. Attacks live apps to find runtime flaws
- D. Only scans network

Answer **C**

4. What is the purpose of covering tracks in penetration testing?

- A. Improve logs
- B. Delete forensic evidence of testing
- C. Encrypt system
- D. Enhance traceability

Answer **B**

5. Which phase is first in penetration testing?

- A. Gaining access
- B. Scanning
- C. Reconnaissance
- D. Covering tracks

Answer **C**

6. Why incorporate risk-based testing in CASST?

- A. To add more tests overall
- B. To prioritize high-impact vulnerabilities
- C. To reduce tool use
- D. To avoid code testing

Answer **B**
