

Exam Name - Certified Cloud Computing Consultant (CCCC)[™]

Sample Exam

1. What is the first step in a cloud migration assessment project?

- A. Choosing a cloud provider
- B. Performing a full-scale migration
- C. Conducting current-state analysis and workload profiling
- D. Configuring security groups

Answer C

2. When designing a multi-cloud solution, a consultant should ensure:

- A. Each cloud provider is used in isolation
- B. Consistent identity, monitoring, and security across providers
- C. One provider handles everything
- D. Unique tooling for each cloud

Answer B

3. What is a key indicator that a workload is a candidate for 'lift-and-shift'?

- A. Requires OS rearchitecting
- B. Needs application modernization
- C. Easy to containerize without code changes
- D. No major code changes or dependencies

Answer D

4. How should a consultant help a client improve cloud security posture?

- A. Disable all security tools to simplify setup
- B. Implement IAM best practices, logging, monitoring, and encryption
- C. Share passwords to simplify access
- D. Allow unrestricted inbound network access

Answer **B**

5. Which architectural principle improves reliability and availability?

- A. Single-zone deployment
- B. Horizontal scaling, redundancy, and graceful failure handling
- C. Monolithic servers with no backups
- D. Manual scaling during peak times

Answer **B**

6. As a consultant advising on DevOps adoption in the cloud, your priority should be:

- A. Pipelines, containerization, IaC, and culture of collaboration/automation
- B. Manual deployments only
- C. Avoiding automation
- D. Teams working in silos

Answer **A**
