Exam Name - Certified Cloud Computing Professional (CCCP)™

Sample Exam

1. Which of the following is NOT a core characteristic of cloud computing as defined by NIST?

   A. On-demand self-service

   B. Broad network access

   C. Measured service

   D. Unlimited free storage

   Answer **D**

2. Which cloud service model provides the greatest level of control to the user?

   A. SaaS (Software as a Service)

   B. PaaS (Platform as a Service)

   C. IaaS (Infrastructure as a Service)

   D. FaaS (Function as a Service)

   Answer **C**

3. What is a hybrid cloud deployment?

   A. Using only public cloud resources

   B. A combination of private and public clouds that are interconnected

   C. Hosting everything on private premises only

   D. Using multiple providers without integration

   Answer **B**

4. What is the primary purpose of cloud autoscaling?

A. To automatically adjust compute capacity based on demand

B. To manually increase resources

C. To decrease network speed during peak hours

D. To reduce physical server count only

Answer **A**

5. Which of the following is an example of serverless computing?

A. Virtual machines on AWS EC2

B. Kubernetes self-managed on-premises

C. Hosting containers on your own servers

D. Azure Functions or AWS Lambda

Answer **D**

6. What does "Infrastructure as Code" (IaC) enable?

A. Automated provisioning and management of infrastructure via code

B. Manual hardware provisioning

C. Only software-defined networks

D. Using paper to document infrastructure settings

Answer **A**
